Abstract

The Global Report on Food Crises (GRFC) Database is a comprehensive resource that compiles and analyzes data on acute food insecurity and malnutrition worldwide. It is part of the broader GRFC initiative, which is an annual report produced through a collaborative effort among 16 partners, coordinated by the Food Security Information Network (FSIN) in support of the Global Network Against Food Crises (GNAFC). The database consolidates data from multiple sources using rigorous methodologies to ensure accuracy and reliability. It highlights underlying and immediate causes of food insecurity, such as conflict, climate change, and economic shocks. It advocates for timely responses to food crises and helps stakeholders monitor progress toward reducing hunger globally.

The data included in Data360 is a subset of the data available from the source. Please refer to the source for complete data and methodology details.

This collection includes only a subset of indicators from the source dataset.
